DataBard

Data as a Living Narrative

Turn your onchain data into AI podcasts and music anthems — then mint them on Solana.

The Problem: The ”Silent” Data Warehouse

Hundreds

of tables in data catalogs go unread and unmonitored daily.

Documentation Rot

Nobody reads the docs. Metadata exists, but it remains disconnected from the teams who need it most.

Onboarding Friction

New team members take weeks to understand complex schemas and warehouse structures.

Silent Failures

Quality tests fail silently in the background. If a critical model breaks, the cascade is only noticed when it's too late.

Governance Blind Spots

PII risks and governance flags are buried in catalogs. Compliance becomes a reactive exercise rather than proactive management.

Hidden Risks

Critical table rankings and lineage hotspots are obscured, leading to unexpected downstream impact.

The Solution: Audio-First Data Intelligence

Alex

THE ENTHUSIASTIC ADVOCATE

Focuses on schema structure, column types, and data modeling choices. Alex highlights the potential and structure of your data.

Morgan

THE SKEPTICAL AUDITOR

Flags failures, computes health scores, and identifies cascading risks. Morgan keeps the focus on quality and reliability.

Natural Dialogue

Two AI hosts discuss your data in a natural, engaging podcast format.

Actionable Insights

Surface critical failures, PII alerts, and health scores instantly.

Deep Drill-down

Click any audio segment to see the underlying columns, tests, and lineage.

How It Works: From Metadata to Media

PHASE 01

Data Ingestion

Sources

OpenMetadata, dbt Cloud, The Graph, and Dune Analytics.

Extraction

Deep API integration to fetch schemas, lineage, and test results.

PHASE 02

Analysis Layer

Health Scoring

0-100 score based on coverage, freshness, and failures.

Risk Mapping

Identifying lineage hotspots and critical table rankings.

PHASE 03

AI Scripting

LLM Engine

GPT-4o-mini generates natural dialogue between hosts.

Context

Scripts are grounded in actual metadata and business glossary terms.

PHASE 04

Audio Production

Synthesis

ElevenLabs TTS with context stitching for natural prosody.

Experience

Dynamic SFX and streaming audio for instant playback.

Enterprise: Empowering the Data Engineer

70%

Reduction in Onboarding Time

By replacing dense documentation with digestible audio overviews of complex data models.

Team Alignment

Keep engineering and analytics teams synchronized on warehouse health, schema changes, and data quality.

Multi-Format Outputs

Generate assets that fit into existing enterprise workflows and communication channels.

MP3 FOR SLACK | PDF HEALTH REPORTS | RSS FEEDS

Proactive Governance

Automatically surface PII risks and ownership gaps during the daily "Data Standup" podcast.

Lineage Awareness

Discuss downstream impacts of upstream failures, preventing data outages before they cascade.

Web3: Protocol Health & Community Trust

Protocol Pulse

99.8% Sync

Real-time monitoring for Subgraphs, Indexers, and Chain Lag.

On-chain Attestations

Every health report can be minted as a snapshot, providing a verifiable history of protocol reliability.

DAO Governance

Automated RSS feeds and audio updates for DAO members to stay informed on technical health.

Subgraph Monitoring

Track entity counts, query latencies, and indexing errors through natural language audio summaries.

Identity of Record

Use .sol or .init domains as the "Identity of Record" for auditors and protocol maintainers.

Public Accountability

Bridge the gap between complex on-chain data and community trust with transparent, auditable updates.

Solana: The Utility Layer for Data Teams

Audit Trails

Permanent, queryable records of data health snapshots stored on-chain via the Memo Program.

MECHANISM

PDA registry stores (schema_fqn, health_score, timestamp, episode_id).

SNS Identity

Native integration with Bonfida's SNS to resolve .sol domains for every data auditor.

INTEGRATION

Wallet address resolved to .sol domain on connect and stored in mint memos.

Palm USD

Non-freezable, 1:1 USD-backed stablecoin payments for Pro tier subscriptions.

CHECKOUT

Native SPL token transfer (29 PUSD/mo) with instant on-chain verification.

Core Features: A Complete Information Engine

[01] HEALTH SCORING

Automated Data Vitality

Proprietary 0-100 scoring algorithm based on test coverage, freshness, documentation completeness, and failure frequency.

[02] RESEARCH TRAILS

Evidence-Based AI

Every AI-generated answer includes a structured plan, verifiable evidence from the metadata, and recommended next actions.

[03] MULTI-PLATFORM

Seamless Distribution

Native sharing to Slack, Discord, Telegram, and Twitter. Private RSS feeds for automated warehouse updates.

[04] DATA ANTHEMS

Algorithmic Music

Transform data trends into full music tracks. Genre, tempo, and mood are dynamically mapped to your data's health score.

Tech Stack: Modern, Scalable, & Integrated

Frontend & UI

Next.js 15 / React 19 — High-performance SSR and streaming capabilities.

Tailwind CSS 4 — Modern, utility-first styling for a responsive interface.

AI & Audio Engine

GPT-4o-mini — Natural dialogue generation grounded in metadata.

ElevenLabs API — High-fidelity TTS with context stitching and SFX.

Data & Metadata

OpenMetadata / dbt — Enterprise-grade cataloging and lineage tracking.

Dune / The Graph — Real-time on-chain data indexing and querying.

On-Chain & Payments

Solana Protocol — Memo Program and PDA registry for audit trails.

Palm USD / SNS — Stablecoin payments and .sol identity resolution.

Roadmap: The Future of DataBard

PHASE 01

Enhanced Analysis

HISTORICAL DIFFS

Automated "Since last week" intros highlighting new failures and score trends.

CUSTOM VOICES

User-defined host personalities and custom ElevenLabs voice cloning.

PHASE 02

Deep Integration

ANCHOR PROGRAMS

Custom Solana programs for richer, more complex on-chain PDA queries.

ENTERPRISE CONNECT

Native connectors for Snowflake, BigQuery, and Databricks catalogs.

PHASE 03

Ecosystem Expansion

DATA ANTHEM MARKET

Mint and trade data-driven music tracks as verifiable protocol artifacts.

DAO AGENTS

Autonomous AI agents that participate in governance based on data health.

DataBard Strategy: Dual-Path Evolution

PATH A

The Data Engineer

GOAL

Awareness, documentation, and team alignment.

TERMINOLOGY

Warehouse, dbt models, PII, Lineage.

OUTPUT

MP3 for Slack/Discord, PDF Health Reports.

PATH B

The Protocol Operator

GOAL

Protocol reliability and community trust.

TERMINOLOGY

Subgraphs, Indexers, Chain Sync, Lag.

OUTPUT

On-chain Attestations, RSS for DAO governance.
